“SAGAMORE GARDENS”

Greetings *1926*

IN PRESENTING you with my first Catalogue, I wish to thank the many customers who gave me orders at my Gardens at Sagamore Highlands, the past Summer. My Gardens are located on the King's Highway on Cape Cod, sixteen miles from Plymouth, Mass., and a mile this side of Cape Cod Canal. Visitors are welcome; and Cut Flowers (Dahlias and Gladioli) are for sale in season. Look for sign on road when touring the Cape.

I hope my Catalogue will be interesting; and to those who call during the season of 1926 I can show some beautiful new flowers not catalogued, and new seedlings.

It will be my desire to please and help all my customers, and send you Bulbs true to name. My Bulbs are all healthy, and have shown no signs of disease or the corn borer.

I hope you all will have a successful season in 1926, and with best wishes I am,

Yours sincerely,

Dr. SHIRLEY S. SHATTUCK.

P. S.—I will be pleased to replace any Bulbs that prove unsatisfactory.

Growing the Dahlia

LOCATION: Open, sunny or partial shade.

Cultivate the soil thoroughly. Plant from May 1st to June 20th. Dig a hole one foot deep. Put in a shovel of manure or other plant food. Cover with an inch of soil. Would advise using stake which should be set firmly in the ground. Plant bulb four inches deep, horizontally, and cover. Cultivate at least once a week. Do not water until plants are well above the ground. When the buds appear, water the plants thoroughly once or twice a week. Apply any good fertilizer, stirring the soil lightly after. To obtain extra large flowers, disbud freely, leaving only a few buds and branches on each plant. If the plant grows too bushy, cut off some of the leaves and side branches and the plant will flower more freely. Green plants should be planted *twice as deep* as they were grown in pots, or four or five inches deep. They should be watered and *shaded* a few days after planting.

Cut Flowers

When using the Dahlia for a cut flower, cut in the cool of the day, either late in the evening or early in the morning. Place stems in deep vessels filled with cold water. Set in cool cellar or ice box for six hours or more. They are then ready for use.

Dahlias Which are Not Catalogued

If you are looking for varieties that are not catalogued it will pay you to write to me before ordering elsewhere, as I carry a large list of uncatalogued varieties, my stock being insufficient to warrant me to catalogue these varieties. If you have any variety in mind that you do not see listed, I will be pleased to have you write me. I have 500 clumps of expensive Dahlias one or two of each kind that are not catalogued.

CARE AND CULTURE

BULBS should not be planted until ground is warm, about the time corn is planted. Always plant in good sunny place to get best results. If soil is light, plant six inches deep. Plant bulbs four inches apart and when they are six or eight inches tall, weed and soften up the ground between stalks of the bulbs. Never allow ground to crust over, as it retards growth. When they are about a foot in height, work fertilizer in around plants. This may be repeated once or twice more before they blossom. When flower spikes appear, abundant watering is very beneficial.

Bulbs should be dug as soon as leaves begin to turn yellow. Cut stems off about an inch above bulb. Let the bulbs dry in the sun for two or three days, then place them in a dry place. Do not have the bulbs more than three inches deep, as they may heat and mold. Trim when they are thoroughly cured, and store in cool dry cellar. It will help the bulbs if they are stirred up and given air during the winter.

GLADDIE BOY. (Bill's Origination). This variety was one of the outstanding new productions at the New England Gladiolus Society Exhibition at Boston 1924. The Massachusetts Horticultural Society voted it a Special Award of Merit. At the American Gladiolus Society Exhibit in New York City, GLADDIE BOY was again in evidence winning the class for "Most Beautiful Basket of Glads" as well as the class for "Most Artistic Table Decoration". It is of the semi-primulinus type retaining the delicate characteristic coloring but in form more mas-

sive. Flowers are well expanded with only slight hooding effect. Those shown in the photographic reproduction on page 19 were produced from small planting size bulbs, the mature bulbs throwing spikes with 18 to 20 buds and opening 6 to 8 perfect flowers at a time. The color is distinctive, the general effect being a Grenadine pink gradually blending with straw yellow deep in the center. To further enhance its beauty, the petals are most gracefully frilled.
